# GRADUATE STUDENT AFFAIRS CONTACT LIST

Dear Graduate Student,

Welcome to the Structural Engineering Department at the University of California San Diego! Please review this Graduate Handbook to inform yourself about the program requirements and important information to know.

If you have any questions or concerns, please contact Graduate Academic Advisor: Kyung J. Brown. She will be your main point of contact and resource. For Graduate Funding concerns, please contact: Sandra de Sousa.

# THE STRUCTURAL ENGINEERING PROGRAM

The Department of Structural Engineering at the University of California San Diego offers a unique program that crosses different engineering disciplines, including civil, geotechnical, mechanical, aerospace, biological, and marine/offshore engineering, with a focus on structural design and analysis, structural materials, computational mechanics, solid mechanics, and structural health monitoring/nondestructive evaluation. This cross-disciplinary yet focused structural engineering approach allows not only diversity in the selection of graduate courses but also a diversity of employment opportunities across the engineering spectrum.

The program is tailored towards the common needs and reliance of different engineering fields on the knowledge and advances in materials engineering, classical structural mechanics theories, computational and numerical analysis tools, experimental structural analysis, and structural health monitoring for applications ranging from nano-structures to large-scale civil infrastructure systems. While providing training on the fundamentals, the program offers specialization within a chosen area through a sequence of discipline specific courses. In particular, the Structural Engineering program offers the opportunity for further education in one or more of the following five primary focus areas that are intimately tied to the current research activities in the Department:

- (1) Earthquake Engineering
- (2) Advanced Composites and Aerospace Structural Systems
- (3) Renewal Engineering
- (4) Structural Health Monitoring, Prognosis and Validated Simulations
- (5) Computational Mechanics

Unique education and research opportunities are provided by faculty expertise across a range of specialties in materials and structural systems of different types and scales, and through the specially designed laboratories including the world-renowned Charles Lee Powell Structural Research Laboratories. This unique facility consists of a set of large-scale testing laboratories where full-scale structural systems ranging from bridges and buildings, ship hulls and deck structures, to aircraft wings and structural systems can be tested using state-of-the-art computer-controlled equipment. The Structural Systems Laboratory houses a 15-m tall reaction wall and a 37-m long strong floor, while the Structural Components Laboratory has a 9-m tall by 19-m wide strong wall with a 14.3 by 21.3-m strong floor, and the Composites Structures Laboratory has a 9-m tall by 5.5-m wide strong wall with a 14.3 by 7.2-m strong floor. The facility also includes a high-capacity shake table and a geotechnical laboratory including a centrifuge and soil boxes.

The research facilities also include state-of-the-art nano-materials characterization facilities, polymer and composite characterization and processing laboratories, composites and aerospace structures laboratories, non-destructive evaluation laboratories, structural dynamics laboratory, a unique 6-DOF seismic response modification device test facility, and other unique facilities. The Englekirk Structural Engineering Center is equipped with the world's first outdoor shake table adjacent to the country's largest soil-structure interaction test facility, allowing researchers to perform dynamic earthquake safety tests on full-scale structural systems. It also houses a blast simulator, which is the world's first facility designed to study structural response to, and damage caused by, bomb blasts without creating actual explosions. Besides enabling one-of-a-kind experiments, the laboratory facilities enable the validation of sophisticated design and analysis models, which are subsequently used for design, numerical prediction, and detailed parametric studies. Thus, a complete systems approach from materials development and large-scale experiments to implementation of sensor networks and development of design recommendations and nonlinear analytical models is typical for research projects in the Department.

Close industrial ties exist between UCSD Structural Engineering faculty and the civil, aerospace, and marine engineering communities. The program is also strengthened by close ties with UCSD's Scripps Institution of Oceanography, the California Space Institute, the San Diego Supercomputer Center, the Environmental Sciences Initiative, and the Los Alamos National Laboratory (LANL). The Department is responsible for a significant portion of the UCSD/LANL Research and Educational Collaboration, a program unique in the Nation that combines UCSD and LANL expertise in specific research areas. These collaborations, in combination with the Powell Structural Research Laboratories, provide a unique research environment for graduate students and faculty alike.

## MASTER OF SCIENCE (M.S.) DEGREE PROGRAM

The M.S. degree program is intended to provide students with additional fundamental knowledge, as well as specialized advanced knowledge, in selected structural engineering aspects over and above the undergraduate degree coursework. In addition to the mainstream M.S. degree in Structural Engineering, there are two Structural Engineering M.S. degree specializations in Structural Health Monitoring and Non-Destructive Evaluation (SHM &NDE) and Geotechnical Engineering. The requirements for these M.S. degree specializations are listed in separate sections of this handbook. Two M.S. degree plans are offered for all degree programs, which are the M.S. Thesis Plan and the M.S. Comprehensive Examination Plan.

The M.S. Thesis Plan is designed for those students with an interest in research prior to entering the structural engineering profession or prior to entering a doctoral degree program. The M.S. Thesis Plan involves course work leading to the completion and defense of a master's thesis. The M.S. Comprehensive Examination Plan focuses on coursework and requires the completion of a comprehensive examination covering multiple courses that the student has taken. The M.S. Comprehensive examination will be comprehensive and cover two focus sequences and at least one additional technical elective that the student has taken. The Comprehensive Examination is formatted such that the student completes sections of the exams throughout their degree program. Requirements for the Comprehensive Examination must be completed no later than the end of the eighth week of the quarter the student intends to graduate.

The department also offers a seminar course each quarter that emphasizes the latest research topics and industry practices in structural engineering (SE 290). M.S. students must complete three quarters of SE 290 to meet graduation requirements, but they do not have to be taken consecutively. Students are strongly recommended to take SE 290 every quarter. Students who cannot fulfill the SE 290 requirement in any quarter must be enrolled in an alternate structured seminar course/program, which must be approved by the SE Graduate Affairs Committee.

A Faculty Mentor will be assigned for each M.S. student. The names of the assigned Faculty Mentor will be shared before or at Graduate Orientation. The Faculty Mentor will assist students with their academic plans and any other questions they may have.

## M.S. STRUCTURAL ENGINEERING SE75

M.S. students must complete 48 units of credit for graduation. For the M.S. Comprehensive Examination Plan all 48 units of credit must consist of regular graduate courses (equivalent to 12 four-unit courses). All 48 units of the M.S. Comprehensive Examination Plan courses must be taken for a letter grade. Up to eight units of approved upper division undergraduate courses can be used for the M.S. Degree. For the M.S. Thesis Plan, 36 units (9 four-unit courses) from regular courses are required and must be taken for a letter grade, in addition to 12 units of graduate research for the master's thesis (SE 299) and can be taken for S/U grade. In addition to the 48 units, students must complete three quarters of SE 290 to meet graduation requirements, but they do not have to be taken consecutively. Students are strongly recommended to take SE 290 every quarter. Units obtained in SE 290 and SE 298 may not be applied towards course work requirements. No more than four units of SE 296 may be applied toward course work requirements and only with prior written approval of the SE Graduate Affairs Committee (GAC).

For both M.S. plans, students are required to complete a minimum of two focus sequences. Any three of the courses listed under a specific topic area constitute a focus sequence. For both M.S. plans, students are required to complete a minimum of two sequences from the following [focus areas](#):

- 1) Structural Analysis
- 2) Structural Design
- 3) Computational Mechanics
- 4) Earthquake Engineering
- 5) Geotechnical Engineering
- 6) Advanced Composites
- 7) Solid Mechanics
- 8) Structural Health Monitoring and Nondestructive Evaluation

A sequence is composed of three pre-approved courses from the same focus area. Pre-approved courses comprising the focus sequences are listed in this handbook. To meet the specific needs of some students, other focus areas may be developed by a student in consultation with his or her Faculty Mentor, but these must be pre-approved by the SE Graduate Affairs Committee. To allow for greater flexibility in the program, the remaining coursework credits required may be earned by completing additional focus sequences, parts of focus sequences, or other appropriate courses. Students may elect to take other appropriate technical electives (with the written approval of their Faculty Mentor and the SE Graduate Affairs Committee).

## Comprehensive Plan M.S. in Structural Engineering

The amount of courses for the M.S. Comprehensive Plan is 12: 3 in 1 focus area, 3 in 2nd focus area, 4 Technical Electives, and 2 Core Courses:

Requirement	Comprehensive option (units)
Core Courses	Two Core Courses (8)
SE Focus Area 1	Three from Focus Area 1 (12)
SE Focus Area 2	Three from Focus Area 2 (12)
Technical Electives	Four from Technical Electives (16)
<b>Total units</b>	<b>48</b>

### Technical Electives:

Technical Electives can be any Science, Mathematics, or Engineering graduate course or [approved SE upper division undergraduate courses](#).

### Core Courses:

M.S. students will be required to complete two out of eight core course electives. The core courses are SE 200, SE 201A, SE 202, SE 203, SE 241, SE 271, and SE 233 (or SE 276A)\*. They can be counted towards a focus sequence or a technical elective.

\* Can only count either SE 233 or SE 276A as a core course, but not both.

In the core courses the instructor selects one problem on the midterm or final exam (could be project/long HW) to be the “comprehensive exam” problem. A separate Pass/Fail score is assigned to this problem. (Problem may still count toward the total exam score.) Minimum passing score is 60/100. Any two courses from “Core Electives” may be selected for the MS Comprehensive Plan. A passing score must be obtained in both courses.

If you are using a core course for a focus area too then you need to list a 5th Technical Elective. It needs to be 12 courses total. If you use both core courses for two focus areas then six Technical Electives are needed.

Sample course plans for students enrolled in the M.S. Comprehensive Examination Plan are as follows:

**Four-Quarter Plan: Civil (Design/Earthquake)**

<b>Fall 2020</b>	<b>Winter 2021</b>	<b>Spring 2021</b>	<b>Fall 2021</b>
SE 213 (Design)	SE 211 (Design)	SE 206 (Earthquake)	SE 201A (Elective)
SE 223 (Design)	SE 203 (Elective)	SE 243 (Earthquake)	SE 241 (Elective)
SE 220 (Earthquake)	SE 222 (Elective)	SE 247 (Elective)	SE 285 (Elective)

**Three-Quarter Plan: Aero (Aerospace/Computational Mechanics)**

<b>Fall 2020</b>	<b>Winter 2021</b>	<b>Spring 2021</b>
SE 276A (Comp. Mech.)	SE 252 (Aerospace)	SE 260B (Aerospace)
SE 201A (Elective)	SE 260A (Aerospace)	SE 276C (Comp. Mech.)
SE 271 (Elective)	SE 276B (Comp. Mech.)	SE 206 (Elective)
SE 223 (Elective)	SE 201B (Elective)	SE 268 (Elective)

*\*\*Students taking the Solid Mechanics focus sequence are required to take SE 271, SE 272 and one of these courses: SE 273, SE 252, or SE 235.*

*\*SE 207 Topics in Structural Engineering will be acceptable to use towards a focus sequence requirement pending petition and approval of the Graduate Affairs Committee (GAC).*

**Thesis Plan M.S. in Structural Engineering**

The thesis defense is the final examination for students enrolled in the M.S. Thesis Plan and must be conducted after completion of all coursework. Upon completion of the research project, the student writes a thesis that must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty members. A complete copy of the student's thesis must be submitted to each committee member a minimum of two weeks prior to the defense. The committee consists of three faculty committee members. The M.S. Thesis Exam Guide, a step by step instructional guide can be found on the [SE Website](#).

<b>Requirement</b>	<b>Thesis option (units)</b>
Thesis Research	SE 299. Graduate Research <b>(12)</b>
SE Focus Area 1	Three from Focus Area 1 <b>(12)</b>
SE Focus Area 2	Three from Focus Area 2 <b>(12)</b>
Technical Electives	Three from Technical Electives <b>(12)</b>
<b>Total units</b>	<b>48</b>

# M.S. SPECIALIZATION: STRUCTURAL HEALTH MONITORING & NON-DESTRUCTIVE EVALUATION SE81

The M.S. in Structural Engineering with specialization in Structural Health Monitoring and Non-Destructive Evaluation (SHM&NDE) trains students in highly interdisciplinary knowledge that incorporates three integrated and broad technology areas: (1) sensing technology; (2) data interrogation; and (3) modeling and analysis. The intersections and integration of these technology areas are fundamental to supporting structural health monitoring and nondestructive evaluation, which may be defined as the process of making an uncertainty-quantified assessment, based on appropriate analyses of *in situ* measured data, about the current ability of a structural component or system to perform its intended design function(s) successfully. This discipline within structural, civil, mechanical, and aerospace engineering is a fundamental capability that supports “design-to-retirement” life cycle management of systems.

Two degree options in SHM&NDE are offered: M.S. Thesis option and M.S. Comprehensive Examination option. Students in either plan must complete 36 units of credit for graduation. For both options, students must complete two core courses, SE 263 Non-destructive Evaluation and SE 265 Structural Health Monitoring Principles (eight total units). In addition to these core courses, the M.S. SHM&NDE Thesis plan involves regular coursework (20 units) and graduate research (eight units) leading to the completion and defense of a master’s thesis. Correspondingly, the M.S. Comprehensive Examination plan involves regular coursework (24 units) and a mentored independent study (SE 296) capstone course. The deliverables will be delivered to the SE 296 Faculty Mentor, assessed by the Faculty Mentor, and both the deliverables and assessment will be submitted to the Graduate Affairs Committee for final approval.

All students in this degree program, for both degree options, must register in SE 290, Graduate Seminar, for any two quarters while enrolled in the program.

Because of the inherent interdisciplinary nature of the MS SHM&NDE program, research within SE 296 or SE 299 may be conducted at outside locations (industry or government facilities). In this case a scientist or engineer on location, with an adjunct faculty appointment at UC San Diego, will be identified as the SE 296 mentor or the SE 299 adviser and who will also be a member of the thesis committee.

The comparative distribution of units for each of the two degree options is shown in the tables below.

## **Comprehensive Plan M.S. in SHM&NDE**

For the M.S. Comprehensive option, the four-unit independent study (SE 296) must be conducted as a capstone experience project. This project is intended to provide a mentored project whereby students integrate knowledge learned from their technology areas into solving a problem from structural health monitoring/prognosis or nondestructive evaluation. The specific deliverables associated with the capstone project experience will be proposed by the student together with the SE 296 Faculty Mentor and will be approved by the Graduate Affairs Committee by the end of the quarter preceding the one in which the students intends to register in SE 296. Email the Academic Advisor to process the request.

<b>Requirement</b>	<b>Comprehensive option (units)</b>
Core courses	SE 263. Non-destructive Evaluation (4)
	SE 265. Structural Health Monitoring Principles (4)
Capstone experience	SE 296. Independent Study or approved equivalent (4)
Focus sequence 1	One from Focus Area 1 (4)
Focus sequence 2	Two from Focus Area 2 (8)
Focus sequence 3	Two from Focus Area 3 (8)
Technical elective	One from Technical Elective (4)
<b>Total units</b>	<b>36</b>

### **Thesis Plan M.S. in SHM&NDE**

For the M.S. Thesis option, the eight-unit graduate research (SE 299) culminates with the preparation of a written research thesis. The thesis must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty members. The committee will consist of three faculty members, one with expertise in each of the three focus areas. A complete copy of the student's thesis must be submitted to each member of the MS thesis committee at least two weeks prior to the defense.

<b>Requirement</b>	<b>Thesis option (units)</b>
Core course	SE 263. Non-destructive Evaluation (4)
	SE 265. Structural Health Monitoring Principles (4)
Thesis research	SE 299. Graduate Research (8)
Focus sequence 1	One from Focus Area 1 (4)
Focus sequence 2	Two from Focus Area 2 (8)
Focus sequence 3	Two from Focus Area 3 (8)
<b>Total units</b>	<b>36</b>

Many courses currently offered within the Jacobs School of Engineering may be grouped into the three focus areas comprising each technology area described above, as shown in the following list:

#### **A. Sensing Technology (Focus Area 1)**

SE 252. Experimental Mechanics and NDE	SE 268. Structural System Testing and Model Correlation
SE 264. Sensors and Data Acquisition for Structural Engineering	CSE 237A. Introduction to Embedded Computing
SE 266. Smart and Multifunctional Materials	ECE 257B. Principles of Wireless Networks

**B. Data Interrogation (Focus Area 2)**

SE 282. Diagnostic Imaging	MAE 283A. Parametric Identification: Theory and Methods
SE 267. Signal Processing & Spectral Analysis	CSE 254. Statistical Learning
SE 268. Structural System Testing and Model Correlation	CSE 255. Data Mining and Predictive Analytics
ECE 251A. Digital Signal Processing I	CSE 250A. Principles of Artificial Intelligence: Probabilistic Reasoning and Learning
ECE 251B. Digital Signal Processing II	CSE 250B. Principles of Artificial Intelligence: Learning Algorithms
ECE 251C. Filter Banks and Wavelets	ECE 271A. Statistical Learning I
ECE 253. Fundamentals of Digital Image Processing	ECE 271B. Statistical Learning II
ECE 254. Detection Theory	

**C. Modeling and Analysis (Focus Area 3)**

SE 201A. Advanced Structural Analysis	SE 236. Wave Propagation in Continuous Structural Elements
SE 202. Structural Stability	SE 253A. Mechanics of Laminated Composite Structures I
SE 203. Structural Dynamics	SE 254. FRPs in Civil Structures
SE 205. Nonlinear Mechanical Vibrations	SE 260. Aerospace Structural Mechanics I
SE 206. Random Vibrations	SE 262. Aerospace Structures Repair
SE 224. Structural Reliability and Risk Analysis	SE 268. Structural System Testing and Model Correlation
SE 233. Computational Techniques in Finite Elements <u>or</u> SE 276A. Finite Elements in Solid Mechanics I	SE 269. Validation and Verification of Computational Models I
SE 235. Wave Propagation in Elastic Media <u>or</u> MAE 238. Stress Waves in Solids	SE 270. Fracture Mechanics and Failure Mechanisms [1–2]

In addition, the technical elective course required for the Comprehensive option may be chosen from any of the focus area lists above (provided it is not being counted as a focus area requirement), or from this additional pre-approved list of courses:

CSE 250C. Machine Learning Theory	MAE 272. Imperfections in Solids
ECE 251D. Array Processing	MAE 273A. Dynamic Behavior of Materials
ECE 250. Random Processes	SE 200. Applied Mathematics in Structural Engineering
ECE 255A. Information Theory	SE 204. Advanced Structural Dynamics
ECE 272A. Stochastic Processes in Dynamic Systems	SE 234. Plates and Shells
ECE 275A. Parameter Estimation	SE 253B. Mechanics of Laminated Composite Structures II
MAE 208. Mathematics for Engineers	SE 276B. Finite Elements in Solid Mechanics II

## M.S. SPECIALIZATION: GEOTECHNICAL ENGINEERING SE82

The Geotechnical Engineering M.S. degree program is intended to provide students with additional fundamental knowledge as well as specialized advanced knowledge in geotechnical engineering over and above that available in the B.S. degree in Structural Engineering at UC San Diego (SE 181, SE 182, and SE 184). Students seeking to pursue the M.S. in geotechnical engineering should have an undergraduate degree in Structural or Civil Engineering. Furthermore, students are required to take SE 181 (Geotechnical Engineering) and SE 182 (Foundation Engineering), or their equivalents at another university, as a prerequisite to pursuing the M.S. degree in geotechnical engineering. Exceptions to this will not be granted, though SE 182 may be taken concurrently with other M.S. coursework with instructor and advisor approval. The M.S. degree program includes required core courses and technical elective courses. M.S. students must complete 48 units of graduate course credit for graduation (12 courses). Students must obtain approval from their advisor and the SE Graduate Affairs Committee on proposed coursework to complete the degree. Although there are no foreign language requirements with the M.S. program in geotechnical engineering, Coordinating Committee on Graduate Affairs (CCGA) recognizes that foreign language competence may be an important element of graduate education of doctoral programs. Two M.S. degree plans are offered – the M.S. Comprehensive Examination Plan and the M.S. Thesis Plan. All M.S. students will be assigned a Faculty Mentor upon entering the M.S. program who can provide guidance on selecting between these plans. Students may switch Faculty Mentor after the first quarter. Students must choose between the M.S. Comprehensive Examination Plan and the M.S. Thesis Plan by the end of the second quarter of study.

In addition to the 48 units, students must complete three quarters of SE 290 to meet graduation requirements, but they do not have to be taken consecutively. Students are strongly recommended to take SE 290 every quarter.

### Comprehensive Plan M.S in Geotechnical Engineering

The M.S. Comprehensive Examination Plan requires 48 units (12 courses) of regular coursework. The comprehensive examination must be taken no later than the end of the 8th week of the quarter for which the student intends to graduate. In the core courses instructor selects one problem on the midterm or final exam (could be project/long HW) to be the “comprehensive exam” problem. A separate Pass/Fail score is assigned to this problem. (Problem may still count toward the total exam score.) Minimum passing score is 60/100. A passing score must be obtained in all four courses.

<b>Requirement</b>	<b>Comprehensive option (units)</b>
Core Courses	SE 241 Advanced Soil Mechanics (4) SE 242 Advanced Foundation Engineering (4) SE 250 Stability of Earth Slopes & Retaining Walls (4) SE 248 Engineering Properties of Soils (4)
Geotechnical Technical Electives	Four Geotechnical Electives (16)
Other Technical Electives	Four from Other Technical Elective (16)
Other Graduation Requirements	3 quarters or more of SE 290
<b>Total units</b>	<b>48</b>

### Thesis Plan in M.S. Geotechnical Engineering

The M.S. Thesis Plan is designed for students with an interest in research prior to entering a professional career or a doctoral degree program. For this plan, 36 units (9 courses) of regular coursework are required, along with 12 units of graduate research (SE 299) for work on an M.S. thesis. The thesis defense is the final examination for students enrolled in the M.S. Thesis Plan and must be taken no later than the end of the 8th week of the quarter for which the student intends to graduate. The thesis must be defended in a public presentation with an oral examination conducted by a committee composed of three faculty members. A complete copy of the thesis must be submitted to the committee at least two weeks prior to the defense.

<b>Requirement</b>	<b>Thesis option (units)</b>
Core Courses	SE 241 Advanced Soil Mechanics (4) SE 242 Advanced Foundation Engineering (4) SE 250 Stability of Earth Slopes & Retaining Walls (4) SE 248 Engineering Properties of Soils (4)
Geotechnical Technical Electives	Three Geotechnical Electives (12)
Other Technical Electives	Two from Other Technical Elective (8)
Thesis Research	SE 299. Graduate Research (12)
<b>Total units</b>	<b>48</b>

### Core Courses

M.S. students in geotechnical engineering must complete the following four core courses:

SE 241 Advanced Soil Mechanics	SS 250 Stability of Earth Slopes & Retaining Walls
SE 242 Advanced Foundation Engineering	SE 248 Engineering Properties of Soils

### Geotechnical Technical Electives

Students must select with approval from the Graduate Affairs Committee at least four courses (M.S. Comprehensive Examination Plan) or three courses (M.S. Thesis Plan) from the following list of geotechnical technical electives. Guidance on selection of the technical electives is provided later.

SE 207 Soil Dynamics	SE 246 Unsaturated Soil Mechanics
SE 222 Geotechnical Earthquake Engineering	SE 247 Ground Improvement
SE 243 Soil-Structure Interaction	SE 248 Engineering Properties of Soils
SE 244 Numerical Methods in Geomechanics	SE 249 Rock Mechanics

### Other Technical Electives

Students may select with approval from the Graduate Affairs Committee any from the following list of other technical electives to meet the 12 required courses beyond the required core courses, geotechnical technical electives, and research graduate credits (if applicable). It should be noted that some of the technical electives have prerequisites that must be fulfilled as noted in the lists below. Guidance on selection of the technical electives is provided below.

SE181 Geotechnical Engineering	SE 182 Foundation Engineering
SE 201A – Advanced Structural Analysis	SE 272 Theory of Elasticity
SE 203 Structural Dynamics (Prerequisite: SE201A)	SE 274 Nonlinear Finite Element Methods
SE 206 Random Vibrations (Prerequisite: SE203)	SE 276A Finite Element Methods in Solid Mechanics I
SE 211 RC/PC Design	SE 276B Finite Element Methods in Solid Mechanics II
SE 212 Steel Design	SE 276C Finite Element Methods in Solid Mechanics III
SE 213 Bridge Design	SIO 225 Physics of Earth Materials
SE 220 Seismic Isolation and Energy Dissipation (Prerequisite: SE201A)	SIO 226 Introduction to Marine Geophysics
SE 221 Earthquake Engineering (Prerequisite: SE201A)	SIO 227A Introduction to Seismology
SE 223 Advanced Seismic Design of Structures	SIO 227B Advanced Seismology
SE 224 Structural Reliability and Risk Analysis	SIO 239 Introduction to the Rheology of Solid Earth
SE 235 Wave Propagation in Elastic Media	

## Suggested Course Sequences

### Geotechnical Engineering:

Students following this course sequence will gain an in-depth understanding of both geotechnical fundamentals and soil-structure interaction phenomena. Students following this course sequence may also choose technical electives to gain expertise in related topics in geology.

SE 248 Engineering Properties of Soils (F)	SE 244 Numerical Methods in Geomechanics (W)
SE 249 Rock Mechanics	SE 247 Ground Improvement (S)
SE 207 Soil Dynamics	SIO 225 Physics of Earth Materials (F)
SE 246 Unsaturated Soil Mechanics	SIO 226 Introduction to Marine Geophysics
SE 222 Geotechnical Earthquake Engineering (W)	

### Geotechnical Earthquake Engineering:

Students following this course sequence will still gain an understanding of geotechnical fundamentals and soil-structure interaction, but will also gain specialization in different aspects of geotechnical and structural earthquake engineering:

SE 201A Advanced Structural Analysis (F)	SE 223 Advanced Seismic Design of Structures (F)
SE 203 Structural Dynamics (W) (Prerequisite: SE201A)	SE 235 Wave Propagation in Elastic Media
SE 206 Random Vibrations (S 21-22) (Prerequisite: SE203)	SE 243 Soil-Structure Interaction
SE 207 Soil Dynamics	SE 244 Numerical Methods in Geomechanics (W)
SE 220 Seismic Isolation and Energy Dissipation (F) (Prerequisite: SE201A)	SIO 227A Introduction to Seismology (S)
SE 221 Earthquake Engineering (Prerequisite: SE 201A) (S)	SIO 227B Advanced Seismology
SE 222 Geotechnical Earthquake Engineering (W)	

### Geomechanics:

Students following this course sequence will still gain an understanding of geotechnical fundamentals and soil-structure interaction, but will also gain specialization in computational techniques that can be applied to the study of geotechnical and structural engineering problems:

SE 207 Engineering Properties of Soils (F)	SE 274 Nonlinear Finite Element Methods
SE 207 Soil Dynamics	SE 276A Finite Element Methods in Solid Mechanics I (F)
SE 226 Groundwater Engineering	SE 276B Finite Element Methods in Solid Mechanics II (W)
SE 235 Wave Propagation in Elastic Media	SE 276C Finite Element Methods in Solid Mechanics III (S 21-22)
SE 243 Soil-Structure Interaction	SIO 225 Physics of Earth Materials (F)

SE 244 Numerical Methods in Geomechanics (W)	SIO 226 Introduction to Marine Geophysics
SE 249 Rock Mechanics	SIO 239 Introduction to the Rheology of Solid Earth
SE 272 Theory of Elasticity (W)	

**Geotechnical and Structural Engineering:**

Students following this course sequence will still gain an understanding of geotechnical fundamentals and soil-structure interaction, but will also gain skills necessary to pursue a joint career in geotechnical and structural engineering:

SE 201A – Advanced Structural Analysis (F)	SE 224 Structural Reliability and Risk Analysis (S)
SE 207 Engineering Properties of Soils (F)	SE 235 Wave Propagation in Elastic Media
SE 211 Advanced Structural Concrete (W)	SE 243 Soil-Structure Interaction
SE 212 Steel Design (F)	SE 244 Numerical Methods in Geomechanics (W)
SE 213 Bridge Design (F 21-22) (Prerequisite: SE 201A)	SE 247 Ground Improvement (S)
SE 222 Geotechnical Earthquake Engineering (W)	SE 249 Rock Mechanics

# Ph.D. PROGRAM IN STRUCTURAL ENGINEERING SE75

The Ph.D. program is intended to prepare students for careers in research, teaching, and advanced professional practice in the broad sense of structural engineering, encompassing civil and aerospace structures, earthquake and geotechnical engineering, composite structures and materials, structural health monitoring and nondestructive evaluation, and engineering mechanics. Depending on the student's background and ability, research is initiated as soon as possible. All students, in consultation with their Faculty Advisors, develop course programs that will prepare them for the Departmental Qualifying Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the Ph.D. degree.

The department also offers a seminar course each quarter that emphasizes the latest research topics and industry practices in structural engineering (SE 290). Ph.D. students must complete three quarters of SE 290 prior to the DQE to meet graduation requirements, but they do not have to be taken consecutively. Students who cannot fulfill the SE 290 requirement for one, two, or three of the quarters must have taken an alternate structured seminar course/program, which must be pre-approved by the SE Graduate Affairs Committee. It is also strongly recommended that all Ph.D. students enroll in SE 290 for at least one quarter in every subsequent year.

## **Doctoral Examinations:**

A Structural Engineering Ph.D. student is required to pass three examinations.

### **1. Department Qualifying Examination**

The Departmental Qualifying Examination (DQE) is the first examination, which should be taken after three to six quarters of full-time graduate study with a minimum cumulative UCSD graduate GPA of 3.5. The examination covers four focus areas in Structural Engineering, which is specified by the Ph.D. student and approved by the Faculty Advisor and the Graduate Affairs Committee. This examination is intended to determine the candidate's core fundamental structural engineering knowledge and his/her ability to successfully pursue a research project at a level appropriate for the doctorate. It is administered by at least two faculty members in Structural Engineering. Students can download The Department Qualifying Exam Guide from the [SE Website](#).

Although the student may elect to satisfy one examination area by coursework, he or she is responsible for material pertaining to four focus areas. Additionally, a student may waive out of a second examination area with the GAC Chair approval if they successfully completed a M.S. Thesis Defense in Structural Engineering. Requests can be sent to [se-gradadm@eng.ucsd.edu](mailto:se-gradadm@eng.ucsd.edu).

In order to satisfy an area by coursework, all the courses in that area must have been taken at UCSD, the grade in each course must be no lower than a B, and the overall GPA in that area must be a minimum of 3.5. To ensure appropriate breadth, the focus areas should consist of the following:

- (a) two focus areas within Structural Engineering which are closely related to the student's research interest
- (b) one focus area, usually within Structural Engineering that is not directly related to the student's area of

research

(c) one minor focus area outside the Department of Structural Engineering. Minor areas too closely related to the major areas will not be approved by the Graduate Affairs Committee.

Sample Courses:

SE Focus Area 1: 3 courses

SE Focus Area 2: 3 courses

Breadth Focus Area: 3 courses

Non-SE Focus Area: 3 courses

Focus Areas for the Departmental Qualifying Examination are listed at the end of this section. In addition, the Department has opportunities to select students in these areas to participate in special seminars, reviews, and research at leading collaborating institutes and laboratories such as the Los Alamos National Laboratories.

Since the examination areas must be approved by the Graduate Affairs Committee, students are advised to seek such approval well before their expected examination date, preferably while planning their graduate studies. Although students are not required to take particular courses in preparation for the departmental examination, the scope of the examination in each area is associated with a set of three graduate courses, generally focus areas offered or approved by the Department. Any transfer credits must adhere to the SE Ph.D. Transfer Credit Policy listed in this handbook.

A candidate can develop a sense of the level of knowledge expected to be demonstrated during the examination by studying the appropriate syllabi and/or discussing the course content with faculty experienced in teaching the courses involved. The Departmental Qualifying Examination may be a written or oral examination, at the discretion of the committee.

Doctoral students who have passed the Departmental Qualifying Examination may take any course for an S/U grade, with the exception of any course that the student's Ph.D. Comprehensive Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all Structural Engineering graduate students take at least one course (other than research) per academic year after passing the Departmental Qualifying Examination.

## **2. Advancement to Candidacy Senate Examination**

The Ph.D. Advancement to Candidacy Senate Examination is the second examination required of Structural Engineering doctoral students. The Ph.D. Candidacy Examination is an oral examination. In preparation for the Ph.D. Candidacy Examination (or Senate Examination), students must have completed the Departmental Qualifying Examination, have a faculty research advisor, have identified a topic for their dissertation research, and have made initial progress in that research topic. Students can download The Advancement to Candidacy Exam Guide from the [SE Website](#).

### **Ph.D. Committee:**

The committee conducts the Ph.D. Candidacy Examination is an oral examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. A short written document, such as an abstract, describing the research plan must be submitted to each member of the committee at least two weeks before the Ph.D. Candidacy Examination. This requirement can also be met by meeting with the doctoral committee members to discuss the nature of the student's dissertation research. The committee may ask questions directly or

indirectly related to the research project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate in the Doctor of Philosophy designation.

At the time of application for advancement to candidacy, in accordance with Academic Senate Regulation 715, a doctoral committee shall be appointed by the Dean of Graduate Studies under the authority of the Graduate Council. The committee must have at least 4 members with UC San Diego faculty appointments; at least 2 members are from SE Department (including the Committee Chair); at least 1 member must be Outside SE Faculty (within UC San Diego); at least 1 member must be tenured or emeritus. Proposed members from other UC campuses, other universities, or industry are exceptions and must be requested in writing.

Example 1

SE Faculty Advisor (Committee Chair)

SE Faculty

Outside SE Faculty (within UCSD)

Outside SE Faculty (within UCSD)

(At least one of the committee members must be tenured or emeritus)

Example 2

SE Faculty Advisor (Committee Chair)

SE Faculty

SE Faculty

Outside SE Faculty (within UCSD)

(At least one of the committee members must be tenured or emeritus)

### **Requirements before the Dissertation Final Defense Examination**

Mentorship and Teaching Experience is required of all Structural Engineering Ph.D. students prior to the Dissertation Defense. The Mentorship and Teaching experience can be satisfied by lecturing one hour per week in either a problem-solving section or laboratory session, for one quarter in an undergraduate course, as designated by the Department. The requirement can be fulfilled by Teaching Assistant service or by undertaking a structured teaching training program for academic credit (through SE 501 and in consultation with the course instructor that quarter). This requirement can also be satisfied by serving as a research mentor to a team of undergraduate or graduate students in a structured, 10-week, environment. Students must contact the Graduate Student Affairs Office in the Department to plan and obtain approval for completion of this requirement.

This Dissertation Defense examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. 3 quarters total, which includes the quarter the student officially advances and the quarter they file for graduation. Summer is not included. For example, if you defend in Winter 2022 then the soonest you would be able to defend in Fall 2023. Again, the earliest would be Fall 2023, as long as you are registered in all three quarters.

### **3. Dissertation Final Defense Examination**

The **Dissertation Defense** is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must be successfully defended in an oral examination and

public presentation conducted by the doctoral committee. The form of the final draft must conform to procedures outlined in the publication: Instructions for the [Preparation and Submission of the Doctoral Dissertation](#) are located at the provided link. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee approximately three weeks before the defense. While the copy of the dissertation handed to the committee is expected to be complete, and in final form, it should be noted that students are expected to make changes in the text per direction of the committee as a result of the defense. Students can download The PhD Final Defense Exam Guide from the [SE Website](#).

The student must make an [appointment](#) with the Graduate Division Office. The appointment needs to be scheduled by the student prior to defending and will cover, formatting of the dissertation, forms required to graduate, when the candidate submits the dissertation, and all final paperwork to the Graduate Division Office. More information about the Exam Policies can be found on the [Graduate Division Website](#).

Upon approval by the Dean of Graduate Division, files the dissertation with the university archivist, who accepts it on behalf of the Graduate Council. Acceptance of the dissertation by the archivist, with a subsequent second approval by the Dean of Graduate Division, represents the final step in the completion by the candidate of all requirements for the doctor of philosophy degree (Ph.D.).

**Ph.D. Time Limit Policy:**

Time limits are set at the end of a Ph.D. student's first year.

Pre-Candidacy Time Limit: Pre-candidacy status is limited to four years.

Support Time Limit: Doctoral students are eligible for university support for six years.

Total Registered Time Limit: The defense and submission of the doctoral dissertation must be within seven years.

The defense and submission of the doctoral dissertation must be within seven years.

**Spring Evaluations:** In the Spring quarter of each year, department faculty members are required to evaluate their doctoral student's overall performance in coursework, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the Faculty Advisor may determine that the student cannot continue in the graduate program.

**Faculty Advisor:**

Ph.D. students are placed with a Faculty Advisor (also known as research advisor/faculty advisor/PI) when they are admitted into the Ph.D. program. A Faculty Advisor is the academic, research, and program guide for Ph.D. students. Additionally, the Faculty Advisor is the funding PI for their assigned PhD students. The student's research and academic performance are evaluated on a quarterly basis via an S/U grade in SE 299. Students who receive an 'U' in SE 299 will be placed in Probationary Status in the following quarter. The student must communicate with the Faculty Advisor to address any deficiencies and formulate a plan to address issues and deficiencies. Receiving two or more 'U's in SE 299 are grounds for dismissal from the student's research group and/or termination of the Ph.D. program. If Ph.D. students need to change their Faculty Advisor at any time, they have 1 quarter to find a new Faculty Advisor. Upon finding a Faculty Advisor, the Ph.D. students must fill out the Change of Advisor DocuSign form provided by the Graduate Academic Advisor.

## Joint Doctoral Program San Diego State University SE 77

The University of California, San Diego and San Diego State University have a Joint Doctoral Program (JDP). For questions regarding the SE UCSD JDP contact Graduate Academic Advisor at: [se-gradadm@ucsd.edu](mailto:se-gradadm@ucsd.edu).

For questions regarding the SE SDSU JDP contact Donovan Geiger at: [dgeiger@sdsu.edu](mailto:dgeiger@sdsu.edu) Admission into the SE JDP are processed by SDSU. Information about [SDSU Admissions can be found here](#).

JDP students must complete three quarters of SE 290 to meet graduation requirements, but they do not have to be taken consecutively. This must be completed before The Departmental Qualifying Examination (DQE). Any exception to this policy must be approved by the Graduate Affairs Committee (GAC) Chair. Requests can be sent to [se-gradadm@eng.ucsd.edu](mailto:se-gradadm@eng.ucsd.edu).

## Ph.D. SAMPLE NON-SE FOCUS AREAS

*(Please check class schedule for quarterly offerings)*

### Seismology

SIO 225 Physics of Earth Materials	SIO 227C Advanced Seismology II
SIO 227A Introduction to Seismology	

### Controls

MAE 280A Linear Systems Theory or ECE 275A Parameter Estimation	MAE 284 Robust and Multi-Variable Control
MAE 280B Linear Control Design or ECE 275B Parameter Estimation II	

### Computer-Aided Design

MAE 291 Design and Mechanics in Computer Technology	MAE 293 Advanced Computer Graphics for Engineers and Scientists
MAE 292 Computer-Aided Design and Analysis	

### Signal Processing

ECE 161A Introduction to Digital Signal Processing	ECE 251C Filter Banks and Wavelets
ECE 251A Digital Signal Processing I	ECE 251D Array Processing
ECE 251B Digital Signal Processing II	ECE 254 Detection Theories

### Mathematics

MAE 290A, B Efficient Numerical Methods for Simulation, Optimization and Control (Choose a third from MAE 232A, MAE 294A, or consent of advisor)	MAE 294B Introduction to Applied Mathematics II
MAE 294A Introduction to Applied Mathematics	MAE 294C Introduction to Applied Mathematics III

### Material Science

MATS 211A Mechanical Properties	MAE 233B Micromechanics
MAE 233A Fracture Mechanics	

## Ph.D. AND M.S. SE 75 FOCUS AREAS

M.S. students are allowed to use up to eight units of the approved Upper Division Undergraduate courses listed below.

Ph.D. students are allowed to take eight units of [approved Upper Division Undergraduate courses](#) for the DQE, but this includes courses counted for the M.S.

### Structural Analysis

SE 201A Advanced Structural Analysis	SE 205 Nonlinear Mechanical Vibrations
SE 201B Nonlinear Structural Analysis	SE 206 Random Vibrations
SE 202 Structural Stability	SE 215 Cable Structures
SE 203 Structural Dynamics	SE 224 Structural Reliability and Risk Analysis
SE 204 Advanced Structural Dynamics	SE 233 Computational Techniques in Finite Elements

### Computational Mechanics and Finite Elements

SE 233 Computational Techniques in Finite Elements	SE 277 Error Control in Finite Element Analysis
SE 276A Finite Element Methods in Solid Mechanics I	SE 279 Meshfree Methods for Linear and Nonlinear Mechanics
SE 276B Finite Element Methods in Solid Mechanics II	SE 280 Finite Element Computations in Solid Mechanics
SE 276C Finite Element Methods in Solid Mechanics III	

### Structural Design

SE 151B Design of Prestressed Concrete	SE 214 Masonry Structures
SE 154 Design of Timber Structures	SE 220 Seismic Isolation and Energy Dissipation
SE 211 Advanced Structural Concrete	SE 223 Advanced Seismic Design of Structures
SE 212 Advanced Structural Steel Design	SE 224 Structural Reliability and Risk Analysis
SE 213 Bridge Design	SE 254 FRP in Civil Structures

### Earthquake Engineering

SE 203 Structural Dynamics	SE 223 Advanced Seismic Design of Structures
SE 206 Random Vibrations	SE 225 Probabilistic Seismic Hazard Analysis
SE 220 Seismic Isolation and Energy Dissipation	SE 227 Seismic Design and Analysis of Nonstructural Components and Systems
SE 221 Earthquake Engineering	SE 243 Soil-structure Interaction
SE 222 Geotechnical Earthquake Engineering	

### Advanced Composites

SE 251A Processing Science of Composites	SE 260B Aerospace Structural Mechanics II
SE 251B Mechanical Behaviors of Polymers & Composites	SE 261 Aerospace Engineering Design

SE 252 Experimental Mechanics and NDE	SE 262 Aerospace Structures Repair
SE 253A Mechanics of Laminated Comp. Structures I	SE 266 Smart and Multifunctional Materials
SE 253B Mechanics of Laminated Comp. Structures II	SE 281 3D Printable Robotics
SE 253C Mechanics of Laminated Anisotropy Plates & Shells	SE 285 Structural Optimization
SE 254 FRP in Civil Structures	SE 286 Design Optimization for Additive Manufacturing
SE 260A Aerospace Structural Mechanics I	

### **Geotechnical Engineering**

SE 222 Geotechnical Earthquake Engineering	SE 246 Unsaturated Soil Mechanics
SE 241 Advanced Soil Mechanics	SE 247 Ground Improvement
SE 242 Advanced Foundation Engineering	SE 248 Engineering Properties of Soils
SE 243 Soil-structure Interaction	SE 249 Rock Mechanics
SE 244 Numerical Methods in Geomechanics	SE 250 Stability of Earth Slopes & Retaining Walls
SE 181 Geotechnical Engineering	

### **Solid Mechanics**

SE 202 Structural Stability	SE 271 Solid Mechanics for Structural & Aerospace Engineering
SE 234 Plates and Shells (or MAE equivalent)	SE 272 Theory of Elasticity
SE 235 Wave Propagation in Elastic Media	SE 273 Inelasticity
SE 252 Experimental Mechanics and NDE	SE 207 Constitutive Modeling of Metals
SE 270 Fracture Mechanics	

### **Structural Health Monitoring and Nondestructive Evaluation**

SE 202 Structural Stability	SE 264 Sensors and Data Acquisition for SE
SE 204 Advanced Structural Dynamics	SE 265 Structural Health Monitoring Principles
SE 205 Nonlinear Mechanical Vibrations	SE 266 Smart and Multifunctional Materials
SE 206 Random Vibrations	SE 267 Signal Processing
SE 224 Structural Reliability and Risk Analysis	SE 268 Structural System Testing and Model Correlation
SE 252 Experimental Mechanics and NDE	SE 269 Validation and Verification of Computational Models I
SE 263 Nondestructive Evaluation	SE 282 Diagnostic Imaging
SE 164 Sensors and Data Acquisition for Structural Engineering	

## COURSE OFFERINGS 2021-2022

The course offerings are posted on the SE website and updated regularly. Here is [the link](#) for 2021-2022 Graduate Courses. You can look at the Course Offerings to better plan your Degree registration/enrollment.

## GRADUATE COURSES

You can read the course descriptions, prerequisites, and requirements in the [Course Catalog](#) and the [SE Website](#).

Example:

**SE 201A. Advanced Structural Analysis (4):** Application of advanced analytical concepts to structural engineering problems. Analysis of frame structures using matrix methods and introduction to the finite element method. Displacement-based and force-based beam element formulations. Development of computer software for structural analysis. **Prerequisites:** SE 130A-B or equivalent, or consent of instructor.

## TECHNICAL ELECTIVES

Technical Electives can be any Science, Mathematics, or Engineering graduate course or [approved SE upper division undergraduate courses](#).

Some classes are cross-listed on the upper division Pre-approved Technical Elective List. Students are not to enroll in the graduate equivalent course if they have already successfully passed the undergraduate version of the course. Any students who would like to be exempt from this policy must discuss their request with their faculty advisor then receive written approval from the Graduate Affairs Committee Chair. Any requests can be submitted to [se-gradadm@eng.ucsd.edu](mailto:se-gradadm@eng.ucsd.edu) with the following information:

1. Course number, name, and grade received in undergraduate course
2. Course number and name of the graduate course desired
3. Reason for repeating the course
4. Written documentation of faculty advisor's approval

## GRADUATE RESEARCH

Any graduate student conducting research must also enroll in SE 299 with the Faculty they are conducting research with.

Ph.D. students conducting research must take SE 299 under his/her Faculty Advisor. Upon completing the first Ph.D. exam, 12 units of SE 299 every quarter until completion is the expectation.

M.S. students completing their Thesis must enroll in SE 299 with their Thesis Advisor. M.S. students completing their M.S. in SHM&NDE must enroll in SE 296 with their Faculty Mentor.

## SE Ph.D. Transfer Credit Policy

Any SE Ph.D. student who would like to request for transfer credits towards their degree, must submit the following for each of the courses they'd like transferred:

1. Course outline
2. Course syllabi
3. The transcript with the course grade (unofficial transcript is acceptable)
4. Supporting documentation noting that the course was not used towards a M.S. degree
5. Description of why the course is equivalent to one of SE courses

All documentation must be sent in via this [SE Transfer Request Google Form](#). The SE Graduate Advisor will have the requests reviewed by the Graduate Affairs Committee (GAC) Chair and communicate in writing the result of the request(s). There is no limit on how many courses may be transferred. If a Ph.D. student obtaining a M.S. Degree on the path to their Ph.D. degree, the student must adhere to all the M.S. policies.

## ENROLLMENT AND REGISTRATION DEADLINES

The [Academic Calendar](#) below has important deadlines for the 2021-2022 Academic Year:

Description	Fall 21	Winter 22	Spring 22
<a href="#">Schedule of Classes</a> available	5/18	11/3	2/4
Enrollment begins for all continuing students	5/21	11/8	2/12
Effective date for fee payment holds	TBD	TBD	TBD

Billing statement available on <a href="#">TritonLink</a> . (eBill available continuing students)	9/2	12/2	3/2
Registration fee payment deadline (after this date, <a href="#">late fees</a> apply)	9/17	12/17	3/18
Deadline for mandatory health insurance waiver - all students (after this date, \$50 late waiver fee will apply until late waiver deadline, see below.)	9/10	12/10	3/13
Quarter begins	9/20	1/3	3/23
Late registration fee payment deadline (to avoid being dropped from enrolled classes or wait listed courses)	9/22	1/3	3/28
First day of classes	9/23	1/3	3/28
Late health insurance fee waiver deadline (no waivers will be accepted beyond this date)	9/15	12/15	3/17
Deadline for all students to add or re-enroll in classes if canceled for non-payment via WebReg. Find out how to <a href="#">add a class</a> .	10/8	1/14	4/8
Deadline to <a href="#">apply for part-time status</a>	10/8	1/14	4/8
Deadline for Graduate students to <a href="#">file for leave of absence</a> , in absentia or to apply for <a href="#">half-time</a> status for current quarter	10/8	1/14	4/8
Deadline to file for Advancement to Candidacy for Master's degrees	10/8	1/14	4/8
Deadline for all students to <a href="#">change grading option</a>	10/22	1/28	4/22
Deadline for Graduate students to change units	12/3	3/11	6/3
Deadline for all students to drop classes without "W" grade on transcript	10/22	1/28	4/22
<b>Description</b>	<b>Fall 21</b>	<b>Winter 22</b>	<b>Spring 22</b>
Deadline for Graduate students to drop with "W" grade on Transcript	11/5	2/11	5/6
Last day of classes before finals	12/3	3/11	6/3

Finals week	12/4-12/11	03/12-03/19	06/04-06/10
Deadline to file for "Removal of Grade Incomplete" from previous quarter	12/11	3/19	6/10
Quarter ends	12/11	3/19	6/10
Deadline to file for a <a href="#">Request to receive a grade of "Incomplete"</a>	12/13	3/21	6/16
Grades available on TritonLink	12/16	3/24	6/16

The [Academic and Administrative Calendar](#) below has the important dates to note for Fall 2021:

<b>Fall 2021</b>	
Fall Quarter begins	Monday, September 20
Instruction begins	Thursday, September 23
Veterans Day Holiday	Thursday, November 11
Thanksgiving Holiday	Thursday – Friday, November 25–26
Instruction ends	Friday, December 3
Final Exams	Saturday – Saturday, December 4–11
Fall Quarter ends	Saturday, December 11
Winter Break	Thursday – Friday, December 23–24
New Year Holiday	Thursday – Friday, December 30–31
- 49 Days of Instruction -	
- 60 Days in Quarter -	

## CAMPUS AND SAN DIEGO AREA INFORMATION

UCSD is situated on a park-like 1,200-acre site high on the bluffs overlooking the Pacific Ocean in La Jolla. La Jolla boasts some of the finest beaches and coves, restaurants, art galleries, and other attractions in the nation. The San Diego metropolitan area - which includes the UCSD campus - enjoys one of the most comfortable climates in the United States, twelve months out of the year.

Much of UCSD's recreational and social life centers on the waterfront, with surfing, scuba diving and other such activities. Mission Bay Park and San Diego Bay beaches are a favorite playground of San Diegans. Mission Bay is a great place for sailing, jet skiing and windsurfing. Throughout the area, students find a variety of amusements, ranging from the small-town atmosphere of waterfront Del Mar southward to the open-air markets of Tijuana and the rustic wilderness of Mexico's Baja California Peninsula.

The city of San Diego is 12 miles south of the campus, and offers a wide range of recreational opportunities, including Old Town (California's birthplace), Sea World in Mission Bay, and the world-famous San Diego Zoo and Safari Park. A year-round calendar of major league sporting events is offered in the city's Sports Arena, Petco Park, home of the Padres, and Qualcomm Stadium, the home of the Chargers.

For theater lovers, there are numerous stages in San Diego, including the Old Globe Theater in Balboa Park-- the site of the National Shakespeare Festival every summer. A year-round program of contemporary and classical professional theater may be enjoyed in the Old Globe and the adjacent and special summer theater fare is featured on the park's outdoor Festival Stage. We also have the La Jolla Playhouse, a professional theatre located on the UCSD campus. The Playhouse is where you can see classic productions, new plays and spectacular musicals. The Department of Theater presents plays in both the 500-seat Mandell Weiss Center of the Performing Arts. The Department of Visual Arts also offers a continuing series of art shows in the University Art Gallery, and displays of student art in other campus galleries.

Fishing opportunities are plentiful offshore in kelp beds west of La Jolla, and surrounding the Coronado Islands in Mexican waters. Bass and trout fishing are available in nearby lakes. An hour's drive to the east, the Laguna Mountains provide pleasure in all seasons for campers and hikers. Beyond the Laguna's lies the vast Anza-Borrego Desert with its breathtaking display of wild flowers in the spring.

The peninsula of Baja California, one of the world's last great wilderness areas, stretches 900 miles southward from the international gateway at Tijuana. The peninsula - a mecca for lovers of unspoiled beaches and untouched mountains and deserts - is the site every year of the grueling Baja cross-country auto race.

## RESEARCH FACILITIES

The high national and international visibility and recognition of the UCSD Structural Engineering program can be attributed to the outstanding and unique experimental facilities and the high quality of the structural engineering faculty.

**The Charles Lee Powell Structural Research Laboratories** have developed over the past two decades into one of the world's leading experimental structural research facilities for large and full-scale testing of structural systems and components. Currently, three separate test facilities comprise the Powell Structural Research Laboratories on UCSD campus.

**The Structural Systems Laboratory** with a 15-m high reaction wall and a 30-m long and 15-m wide strong floor is capable of full-scale testing of up to 5-story buildings under simulated seismic loads and complete bridge systems under simulated traffic and/or seismic load conditions.

**The Structural Components Laboratory** features a 20-m long reaction wall for structural component tests such as columns, beams, joints, etc., and a 5 x 3-m shake table for real time earthquake load simulation on structural models and components with payloads close to 40 tons.

**The Composite and Aerospace Structures Laboratory** is dedicated to the evaluation of advanced composite structural components and systems. State-of-the-art equipment including servo-controlled hydraulic actuators and signal conditioning for up to 1,500 high-speed data channels provides structural testing capabilities which are unequaled worldwide.

**The Powell Structural Research Laboratories** also include manufacturing and materials characterization laboratories, such as the **Advanced Composites Laboratory** for advanced composite materials and structural members, and geotechnical research laboratories with a state-of-the-art geotechnical centrifuge (5 meter diameter).

A fourth large-scale structural testing laboratory houses the **Caltrans Seismic Response Modification Device (SRMD) Testing Facility** for the full-scale testing and evaluation of seismic response mitigation devices such as base-isolation bearings and dampers.

With its one-of-a-kind facilities, the **Englekirk Structural Engineering Center** at the Elliot Field Station of the University of California San Diego is enabling structural tests that have never been possible before. The Center is equipped with the world's first outdoor shake table (<http://nees.ucsd.edu>), as part of the Network for Earthquake Engineering Simulation supported by NSF, allowing researchers to perform dynamic earthquake safety tests on full-scale structural systems. Adjacent to it is the country's largest soil-structure interaction test facility. The Center's **blast simulator** is being used to study the effects of bomb blasts and test new technologies to harden buildings against terrorist bomb attacks.

Other research laboratories include the **NDE & Structural Health Monitoring Laboratory**, **Structural Dynamics Laboratory**, and the **Active, Responsive, Multifunctional, and Ordered-materials Research (ARMOR) Laboratory**. Laboratory listings and additional information can be found on our website: ([SE Testing Facilities](#)).

## IMPORTANT NUMBERS - IN CASE OF EMERGENCY

<i>EMERGENCY</i> – Life threatening situation	
From a campus phone	911
From a cell phone, call UCSD Campus Police	(858)534-HELP (4357)
